- Keep Your Seat Belt Fastened While You are Seated.
- Keep the Overhead Storage Bin Free of Heavy Articles.
- Pay Attention to the Pref light Briefing.
- Listen to the Flight Attendants

250-word paper summarizing

I have been always cynical about the entire concept of data visualization just because there are so many helpful ways to visualize data. Although this week’s task has taken me more time than I envisioned, I truly enjoy working on that part of the project. I discovered several benefits of using infographics for data visualization. Infographics are easily to read, very quickly to understand, and very easy to remember. With infographics, the targeted audiences and readers can quickly scan the document, understand the message you are trying to get across, and remember it long after they leave the page. Infographics are persuasive and eye-catching. Mostly every loves information, especially statistics, numbers, and figures. Infographics are perfect for compiling a lot of data into one easy-to-follow format that is both nice to look at and persuasive. Not only will your audience appreciate the flawless format of your information, they will also find your information more credible and compelling. Infographics allow you to connect with the target audience. They are aimed at educating or teaching people, but they are not used to sell. Creating the ability to tell your audience what you want it to know by focusing just on the basic information is brilliant. This characteristic allows you to not only educate your audience but also build a relationship with them as well. Finally, I used a lot of colors that can catch everyone attention. I realized that infographics could give the opportunity to generate more traffic to the presentation. I believe that if the infographic is beautiful and compelling, it will naturally drive more attention to readers.
